

# MECL III INTEGRATED CIRCUITS FROM MOTOROLA MECL III

MC1600 Series (-30°C to +85°C)

ISSUE C

The requirement for digital systems with ever higher performance has increased the need for high-speed integrated circuits. The industry has recognized that the only economical way to obtain high operating system speed is through the use of emitter-coupled logic. Motorola offers a state-of-the-art, emitter-coupled logic family with sub-nanosecond propagation delays – MECL III.

MECL III circuit design is similar to that used in the popular MECL 10,000 family. In the MECL III line, as well as MECL 10,000, advanced processing techniques are employed and the capability for driving low-impedance terminated lines is provided. MECL III is recommended for new designs.

## GENERAL FEATURES

- Gate Switching Speeds of 1.0 ns typical
- Capability of Driving Terminated Lines with Impedance as Low as 50 Ohms
- Flip-Flop Toggle Rate Greater Than 500 MHz
- Operation with Unused Inputs Left Open
- Multilayer Metalization for economy
- New Packages with Improved Electrical and Thermal Characteristics
- Compatibility with MECL 10,000 Series
- Counting Speeds to above 1 GHz

## FUNCTIONS AND CHARACTERISTICS ( $V_{CC} = 0$ , $V_{EE} = -5.2$ V, $T_A = 25^\circ\text{C}$ unless otherwise noted.)

#DC Loading Factors are based on:

1. Full load output current,  $I_L = -25$  mA dc max
2. Maximum input current,  $I_{IN} = 350$   $\mu$ A dc
